

Collagenizing

Soft Skin

Rejuvenation

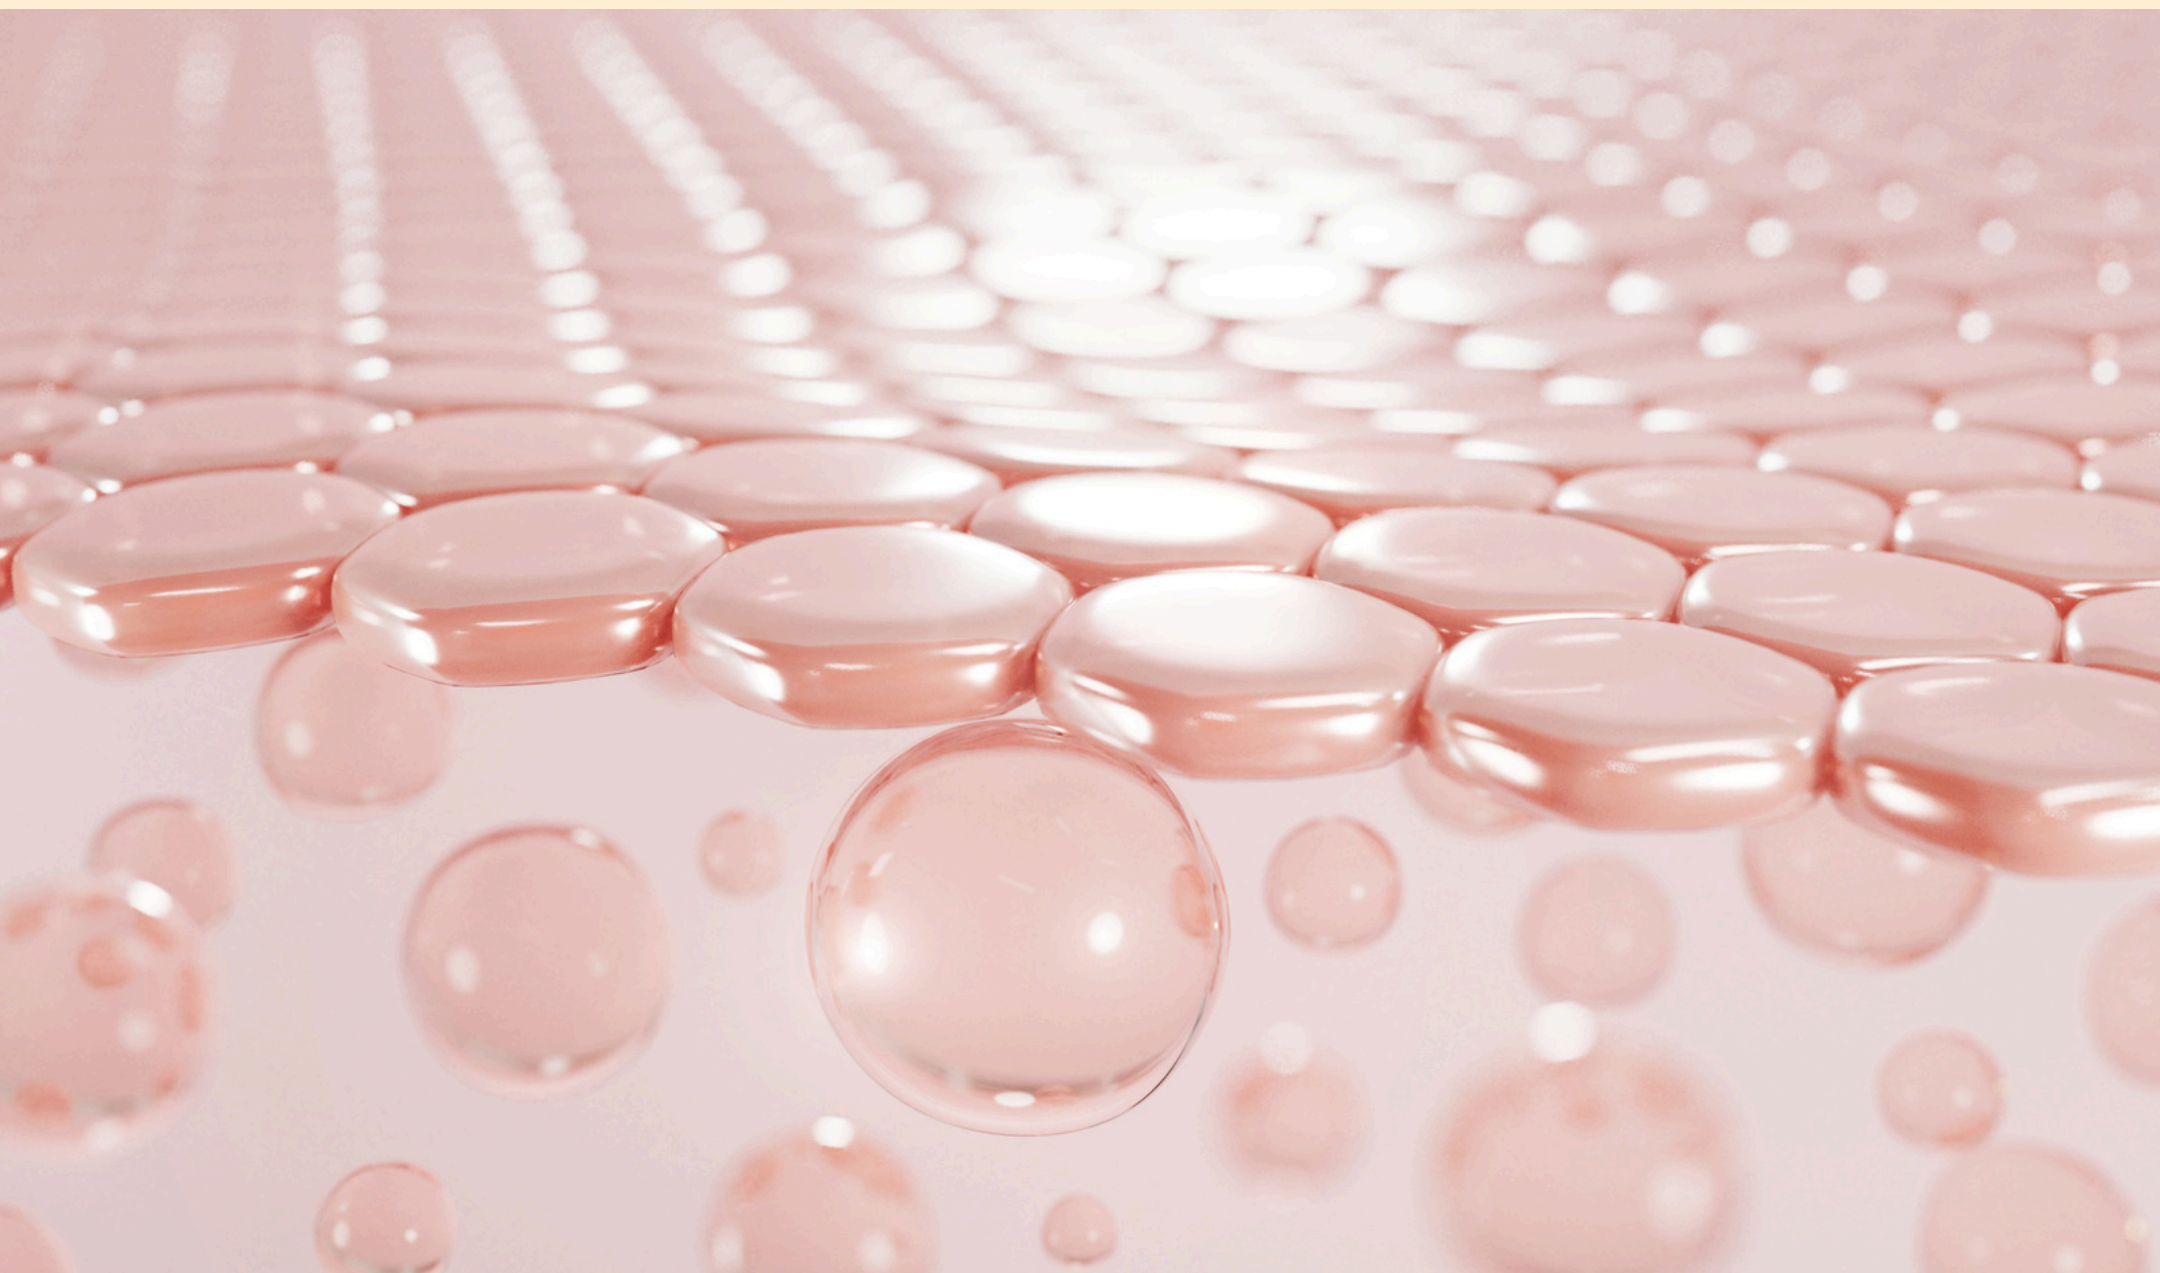

Beauty is Ageless

Collagenizer II

What Is Collagenizing®

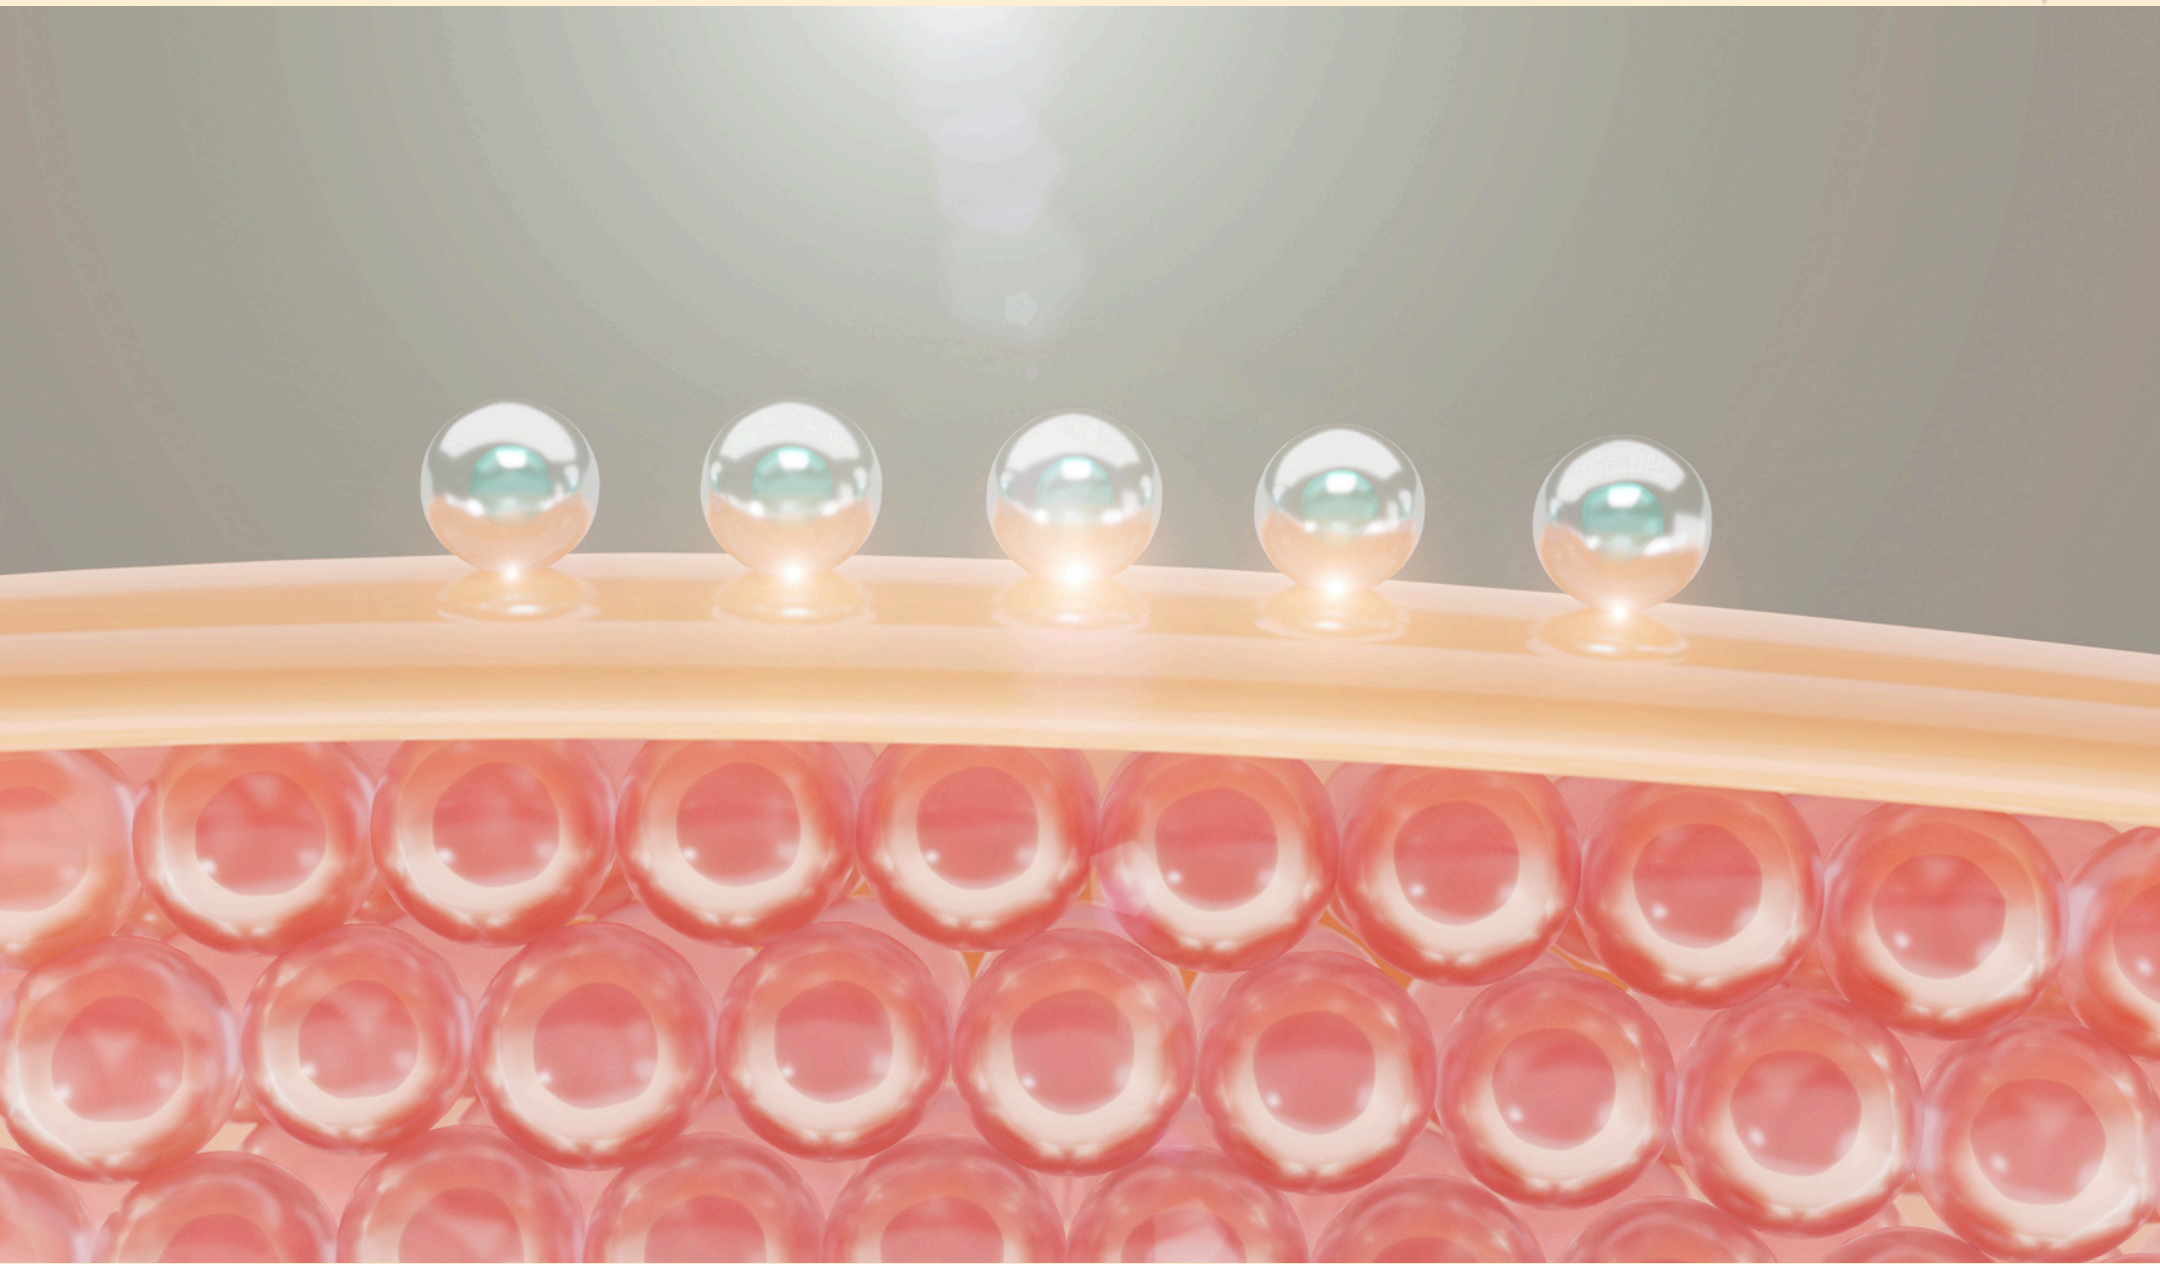

A Technology used in Gene Therapy

“soft skin rejuvenation” method that yields instant enhancement without needles and toxins and with no discomfort during or after treatment

Electroporation is a medical therapeutic method used in the delivery of lifesaving drugs and beneficial genes directly into human cells.

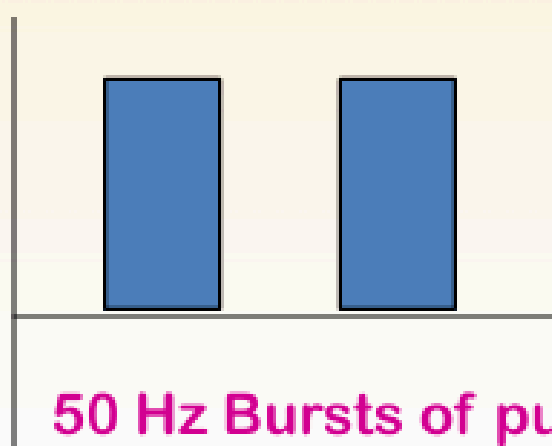

What Is Collagenizing®

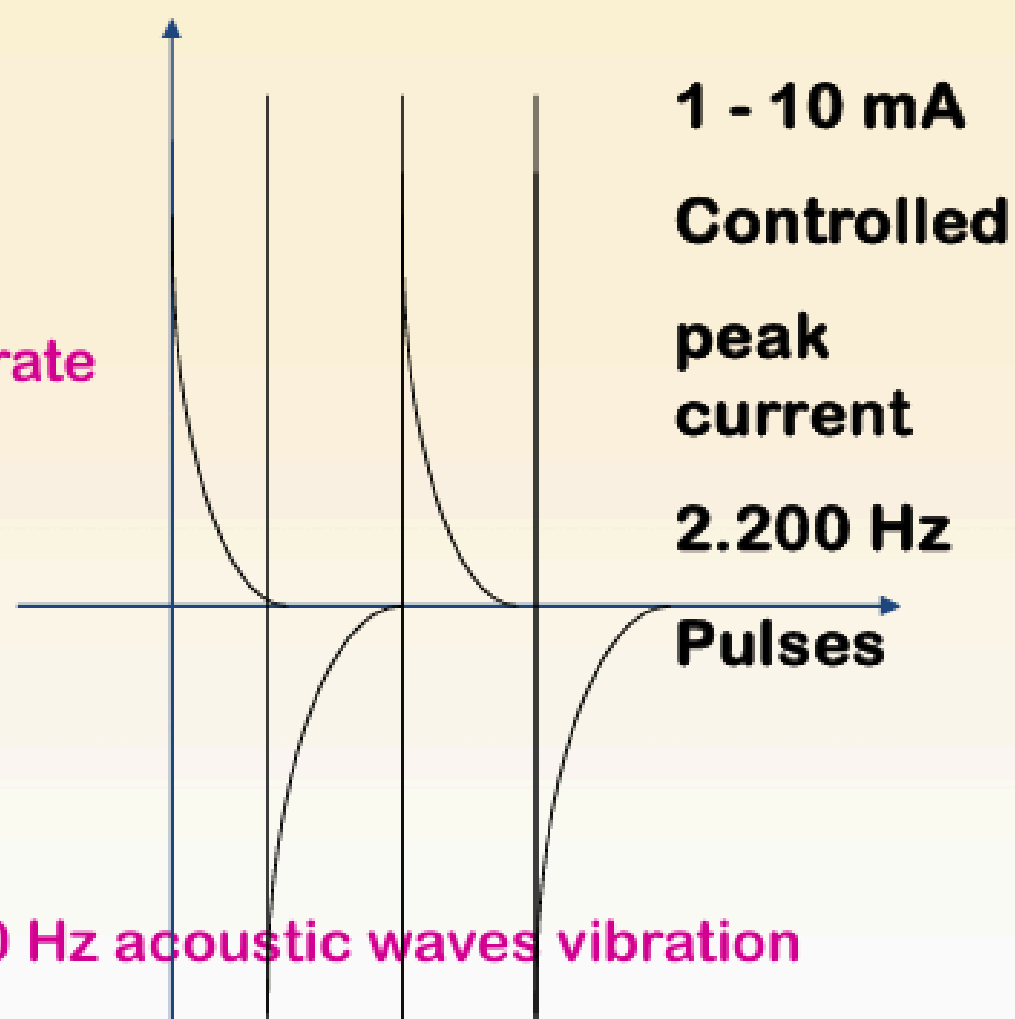

Collagenizing® - the Science

Predictive Permeation® aka Dermoelectroporation®

- Macromolecules delivery
- Controlled current pulses
- No adverse effects
- No pH change of skin or substrate
- No electrolysis

50 Hz Bursts of pulses + 50/100 Hz acoustic waves vibration

Absorption of Macro Molecules

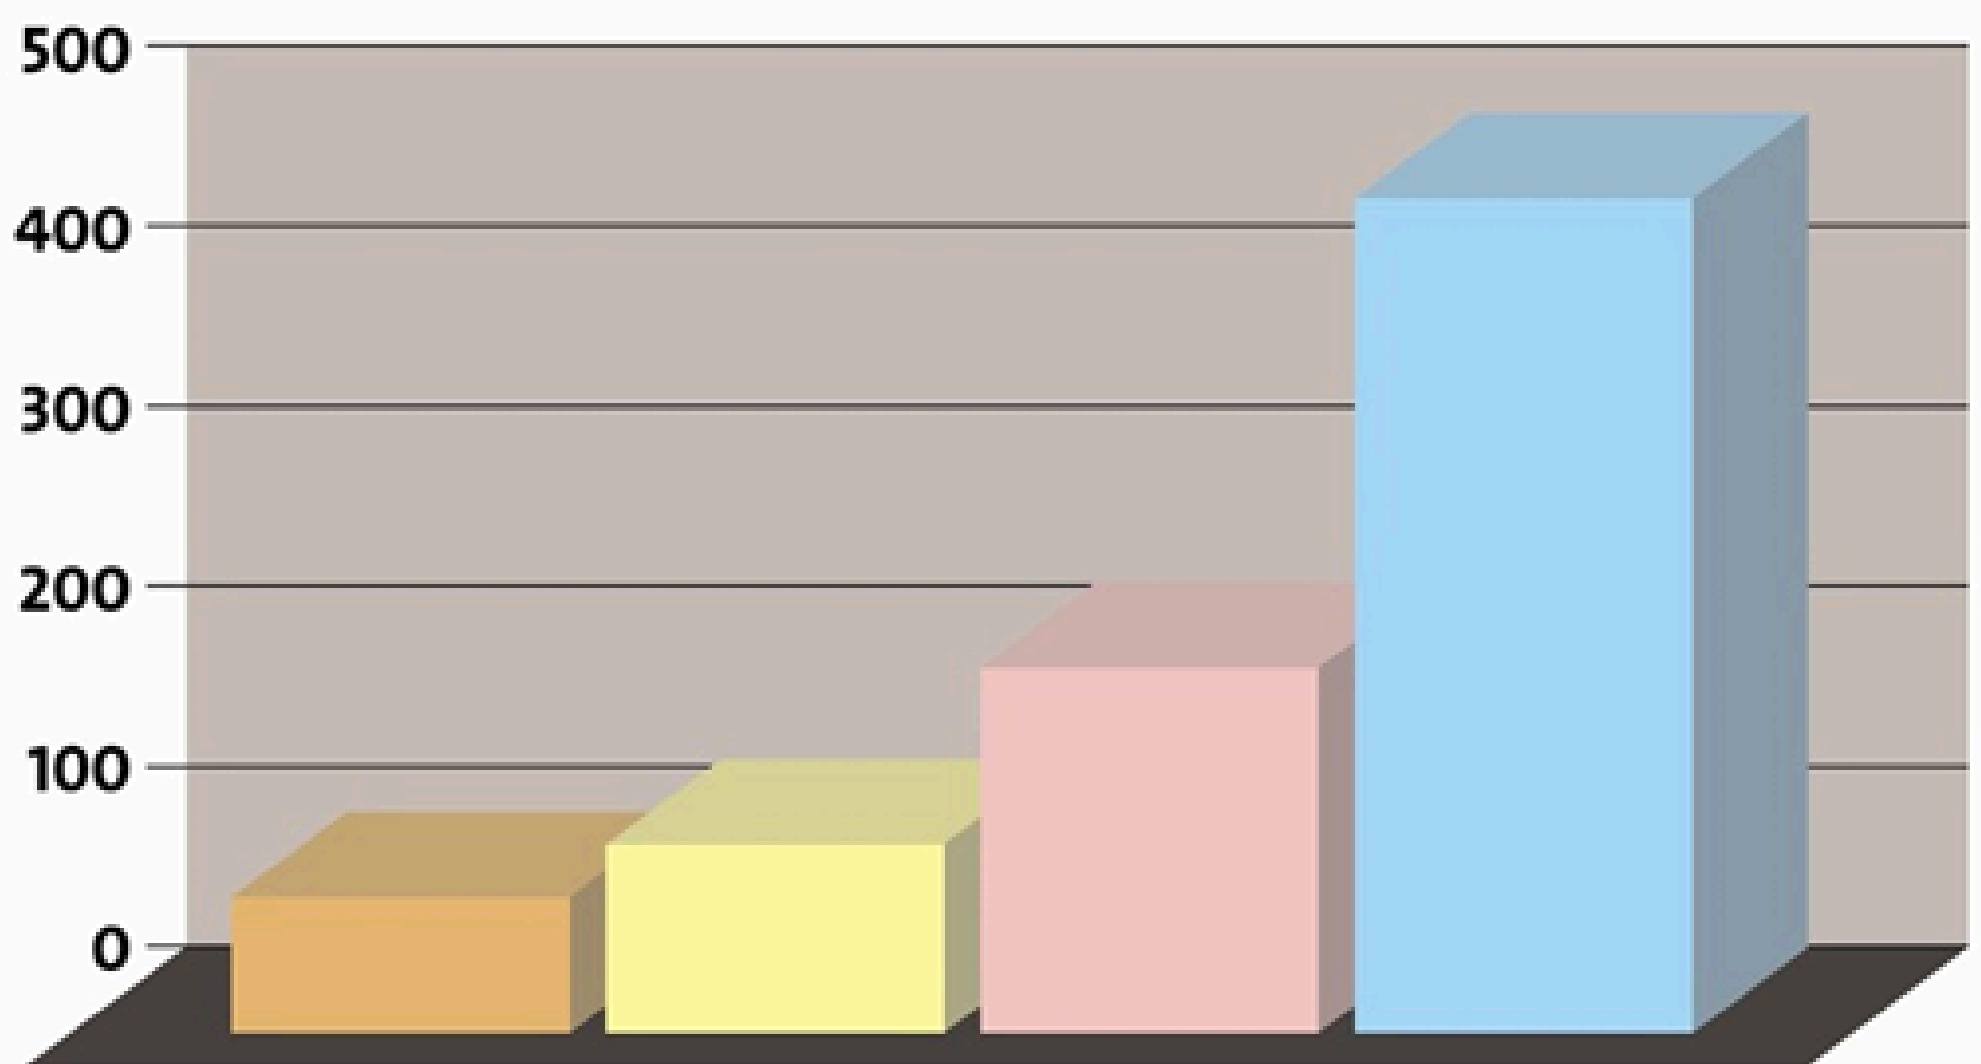

- Collagen $\geq 1,000,000$ Dalton*
- Hyaluronic Acid $\geq 1,500,000$ Dalton*

Scientific Proof

The Collagenizing® Effect

- Positive and negative ions of the Collagen serum are delivered at the same time
- There is no Electrolysis effect and no change in serum pH
- No irritation or damage to the skin
- No need for return electrode, conductive gels, pre-charged compounds or pH compensating patches: No pain or discomfort to the patient, no needles used
- Allows to determine the dosage to administer
- Allows reproducibility of the treatment

Peeling + Collagenizing®

NO MICRODERMABRASION - NO DERMOELECTROPORATION™

NO MICRODERMABRASION - DERMOELECTROPORATION™ ONLY

MICRODERMABRASION ONLY - NO DERMOELECTROPORATION™
